Typhoon "OMPONG" (I.N. "MANGKHUT")  
as of 6:00 AM, 04 October 2018 - 6:00 AM, 05 October 2018

Releasing Officer:

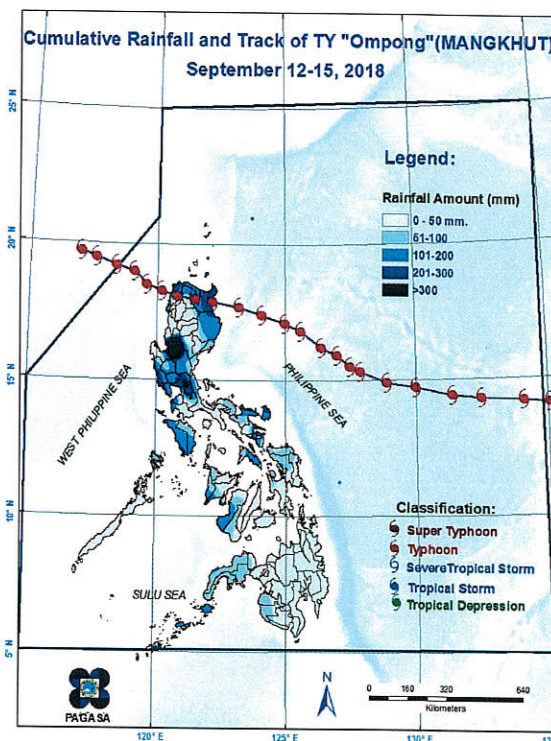

**USEC RICARDO B. JALAD**  
Executive Director, NDRRMC and  
Administrator, OCD

**DATE : 05 October 2018 ; 6:00 AM**

Sources: DOST-PAGASA, DILG, DSWD, DOH, DOE, NEA, DepEd, NTC, PNP, AFP, PCG, BFP, NDRRMC Response Cluster, OCDROs I, II, III, CALABARZON, MIMAROPA, V, VI, VII, VIII, CARAGA, ARMM, CAR, and NCR

### I. SITUATION OVERVIEW

- Typhoon "OMPONG" is the 15th tropical cyclone (TC) to enter or develop within the Philippine Area of Responsibility (PAR) this year and the 3rd TC for the month of September.
- "OMPONG" developed from an area of low pressure situated over the Marshall Islands in the evening of 07 September 2018, 12 hours later, the system reached Tropical Storm (TS) intensity just northwest of Bikini Atoll in the Marshall Islands.
- OMPONG maintained a steady westward pace due to the steering influence of the ridge of high pressure situated to the north of the system.
- At 2:00 AM, 09 September 2018, it intensified into a Severe Tropical Storm (STS) while traversing the area of ocean to the north of the Micronesian state of Pohnpei. It continued to move westward threatening the Northern Mariana Islands. Then, at 2:00 PM PT on the same day, "OMPONG" had reached Typhoon (TY) intensity.
- The typhoon continued moving generally westward while gradually increasing in intensity.

- “OMPONG” left the Marianas and continued moving westward threatening the Philippines. At 8:00 PM, 11 September, the typhoon reached its peak intensity of 205 km/h.
- “OMPONG” maintained its intensity as it entered the PAR on 12 September at 3:00 PM.
- While inside the PAR, OMPONG started its gradual transition from westward to a more west-northwestward movement as it skirts the periphery of the weaker portion of the ridge of high-pressure.
- The typhoon made landfall over the remote portion of Baggao, Cagayan at 1:40 AM, 15 September.
- Interaction with the rugged terrain of Northern Luzon after landfall caused the typhoon to weaken significantly after traversing Luzon.
- “OMPONG” left the landmass of Luzon at around 10:00 AM, 15 September 2018 and then left the PAR later that day at 9:00 PM, with an estimated maximum sustained wind of 145 km/h and gustiness of up to 165 km/h.
- The typhoon continued northwestward towards southern China where it made landfall in China’s Guangdong Province in the area west of Macau and Hong Kong.
- The typhoon caused widespread damage across Northern and Central Luzon due to its intense nature and large size (~ 900 km). Interaction with the rugged terrain of Northern Luzon have aggravated the nature of rainfall, which caused flooding and landslides especially in the mountainous Cordillera Administrative Region (CAR)
- TY “OMPONG” affected Regions I, II, III, CALABARZON, MIMAROPA, NCR, and CAR.
